IN THE ABSTRACT

Please delete the current Abstract in its entirety and
substitute therefore the following New Abstract:

NEW ABSTRACT

A beverage making device including a brewing chamber defined by an upper wall with one or more holes through which heated water can enter a brewing chamber, and by a wall of a first removable part having an edge that can abut against the upper wall via a first seal to form the brewing chamber. The first removable part is provided with outlets for guiding brewed liquid out of the brewing chamber. A second removable part is provided for replacing the first removable part and for guiding heated water from the one or more holes to outside the device without contacting the upper wall.
